PROFILE

Bachelor's degree in Information Technology with experience as a Software Engineer in modern application development. Strong focus and interest in developing responsive, intuitive, and high-quality user interfaces, supported by skills in backend development, API integration, and system design. Accustomed to working collaboratively in teams to build scalable, maintainable, and user-oriented software solutions.

WORK EXPERIENCE

Front-End Developer di PT Agrinas Pangan Nusantara – April 2025 – Juni 2025

- Developed a front-end application based on Laravel, Inertia.js, and React.
- Built a dashboard, role-based access, and master data CRUD modules.
- Developed a schedule management feature and photo-based reporting.
- Improved UX with validation, notifications, and a responsive UI.

Software Engineer di PT Nose Herbal Indo – Okcober 2025 – May 2026

- Served as a Full-Stack Developer in the development of a financial insights platform using React, TypeScript, FastAPI, and a microservices architecture.
- Developed multilingual news features, content personalization, subscriptions, market reports, and PDF export.
- Designed and developed scalable backend services for analytics, market data processing, reporting, and real-time communication.
- Implemented authentication, payment integration, caching, performance optimization, and user engagement automation.
- Developed a warehouse inventory management system using React and a Cloudflare-based backend infrastructure.
- Led a team of four Software Engineer Interns throughout the project development and delivery.
